

AMENDMENTS TO THE CLAIMS

The following listing of claims replaces all previous claim listings and versions.

1. (Previously Presented) A cellular phone comprising:

(a) a memory storing first data indicative of predetermined sites;

(b) a controller; and

(c) a modem which modulates signals to be transmitted from said cellular

phone and demodulates signals received, wherein:

said controller receives second data from a base station which second data indicates a site of the cellular phone, compares the thus received second data to said first data, and stops an operation of said modem, if said cellular phone is located at said predetermined sites indicated by said first data.

2. (Original) The cellular phone as set forth in claim 1, wherein said predetermined sites are sites in which it is unpreferable to make a call through a cellular phone.

3. (Original) The cellular phone as set forth in claim 1, wherein said controller downloads said first data into said memory from an external database.

4. (Cancelled)

5. (Previously Presented) A cellular phone comprising:

a controller; and

a modem which modulates signals to be transmitted from said cellular

phone and demodulates signals received, wherein:

said controller receives from a base station both first data which indicates a site of the cellular phone, and second data which indicates a first site within a service

area covered by said base station, compares the thus received first data to said second data, and stops an operation of said modem, if said cellular phone is located at said first site.

6. (Original) The cellular phone as set forth in claim 5, wherein said first site is a site in which it is unpreferable to make a call through a cellular phone.

7. (Original) The cellular phone as set forth in claim 5, wherein said controller downloads said second data thereinto from an external database.

8. (Cancelled)

9. (Currently Amended) A cellular phone comprising:

(a) a memory storing first data indicative of a first area being circular and having a radius of about 50M in which predetermined sites are centered; and

(b) a controller; and

(c) a modem which modulates signals to be transmitted from said cellular

~~(d)~~ phone and demodulates signals received, wherein:

said controller receives from a base station second data which second data indicates an area of the cellular phone, compares the thus received second data to said first data, and stops an operation of said modem, if said cellular phone is located in said first area.

10. (Original) The cellular phone as set forth in claim 9, wherein said predetermined sites are sites in which it is unpreferable to make a call through a cellular phone.

11. (Original) The cellular phone as set forth in claim 9, wherein said controller downloads said first data into said memory from an external database.

12. (Cancelled)

13. (Previously Presented) A cellular phone comprising:

a controller; and

a modem which modulates signals to be transmitted from said cellular phone and demodulates signals received, wherein:

said controller receives from a base station both first data which indicates an area of the cellular phone, and second data which indicates a first area being circular and having a radius of about 50M and centrally including a predetermined site within a service area covered by said base station, compares the thus received first data to said second data, and stops an operation of said modem, if said cellular phone is located in said first area.

14. (Original) The cellular phone as set forth in claim 13, wherein said first area is an area in which it is unpreferable to make a call through a cellular phone.

15. (Original) The cellular phone as set forth in claim 13, wherein said controller downloads said second data thereinto from an external database.

16. (Cancelled)

17. (Previously Presented) A method of operating a cellular phone, comprising the steps of:

(a) storing first data indicative of predetermined sites;

(b) receiving second data from a base station which second data indicates a site of the cellular phone;

(c) comparing said second data to said first data; and

(d) stopping an operation of a modem of said cellular phone, if said cellular phone is located at said predetermined sites.

18. (Original) The method as set forth in claim 17, further comprising the step of downloading said first data from an external database.

19. (Cancelled)

20. (Previously Presented) A method of operating a cellular phone, comprising the steps of:

(a) receiving from a base station both first data which indicates a site of the cellular phone, and second data which indicates a first site within a service area covered by a base station;

(b) comparing said first data to said second data; and

(c) stopping an operation of a modem of said cellular phone, if said cellular phone is located at said first site.

21. (Original) The method as set forth in claim 20, further comprising the step of downloading said first data from an external database.

22. (Cancelled)

23. (Previously Presented) A method of operating a cellular phone, comprising the steps of:

(a) storing first data indicative of a first area being circular and having radius of about 50M in which predetermined sites are centered;

(b) receiving from a base station second data which second data indicates an area of the cellular phone;

(c) comparing said second data to said first data; and

(d) stopping an operation of a modem of said cellular phone, if said cellular phone is located in said first area.

24. (Original) The method as set forth in claim 23, further comprising the step of downloading said first data from an external database.

25. (Cancelled)

26. (Previously Presented) A method of operating a cellular phone, comprising the steps of:

(a) receiving from a base station both first data that indicates an area of the cellular phone, and second data which indicates a first area being circular and having a radius of about 50M and centrally including a predetermined site within a service area covered by said base station;

(b) comparing said first data to said second data; and

(c) stopping an operation of a modem of said cellular phone, if said cellular phone is located in said first area.

27. (Original) The method as set forth in claim 26, further comprising the step of downloading said first data from an external database.

28. (Cancelled)
